

Dear Hiring Manager,

I'm Abhigyan Ghosh (MSBA '25, University of Notre Dame) with 6+ years in analytics across enterprise technology, retail, and logistics. I'm applying for the Business Development & Data Analyst role at Temple Allen Industries.

I'm a data-first problem solver who partners well with engineering and operations to turn analysis into clear business cases, pricing models, and executive-ready recommendations. I'm fluent in Excel (advanced modeling), SQL, Python, and Power BI, and comfortable translating technical detail into customer value.

I'm excited by TAI's mission at the intersection of aerospace manufacturing and smart automation. While my background is in analytics and business operations, I ramp quickly on technical domains and bring a disciplined, hypothesis-driven approach to evaluating features, forecasting demand, and communicating ROI to customers—from operations teams to engineering leadership.

I'd welcome the chance to discuss how I can contribute to market sizing, pricing strategy, proposal development, and post-launch analytics at TAI. Thank you for your consideration.

Sincerely,
Abhigyan Ghosh
